

Synergy of blockchain and business applications

Smart contract and business application platform.
Develop. Integrate. Trade.

Description

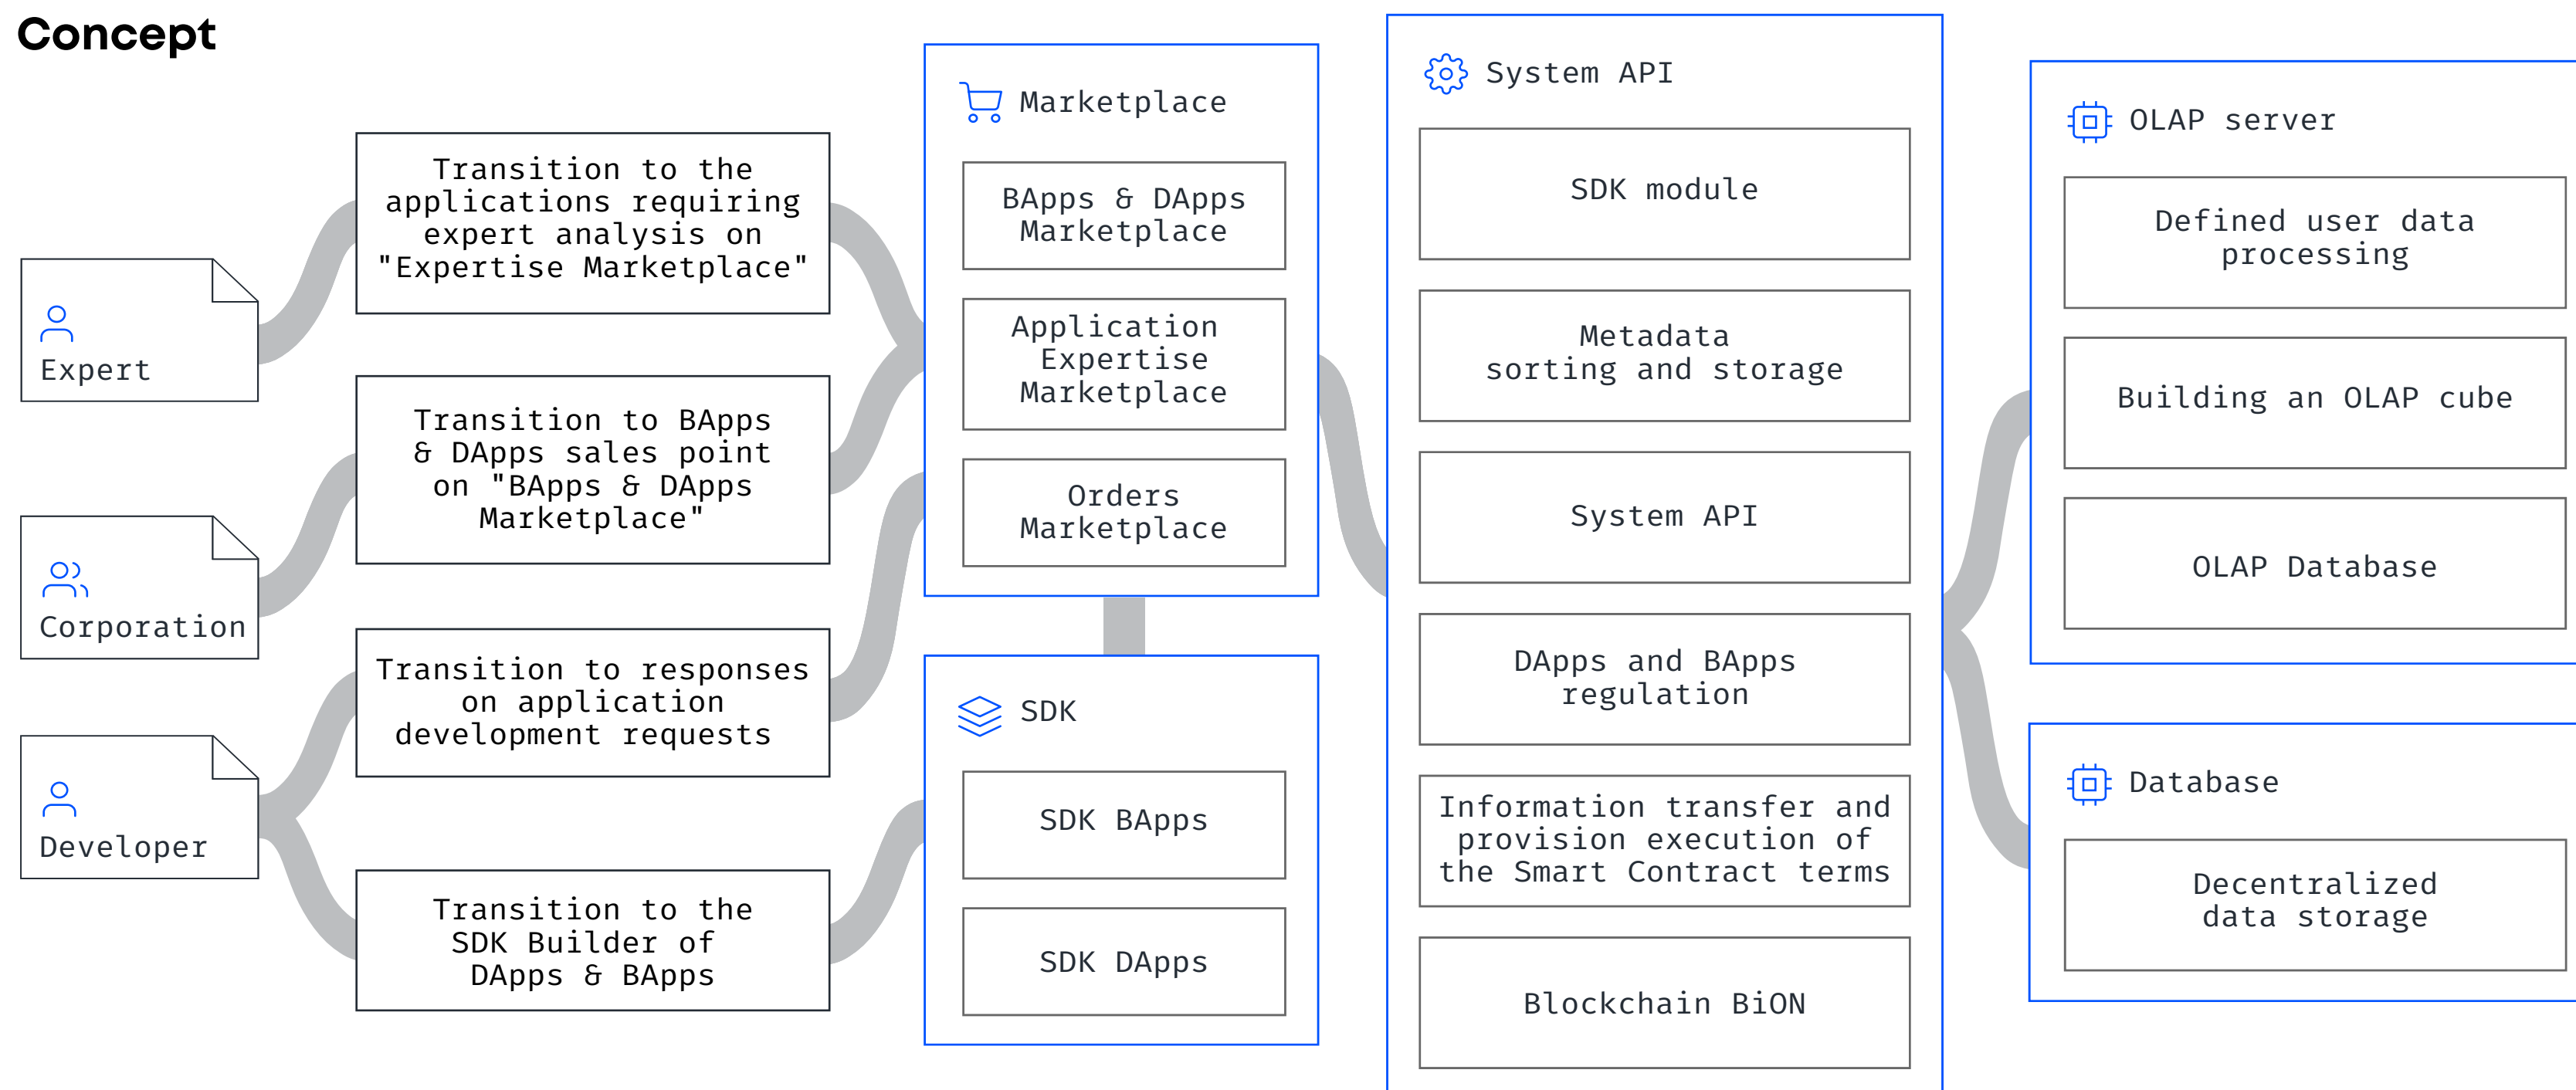

The platform allows users to develop a decentralized application (dApp) from ready-made software blocks, implement Smart Contract and latest business intelligence technologies and finally, integrate the designed solution right away into the business process. Moreover, the developed solution can be traded on the BiON marketplace later on.

In order to ensure high speed and reduced costs of the platform transactions, BiON offers its own blockchain network.

According to the alliedmarketresearch.com, the blockchain market in the segment of corporate software applications will reach \$13.9 billion by 2025. Accordingly, BiON targets on the revenue growth in a short term. BiON's "2021 Plan" implies 10-fold growth of the revenue and the number of platform users, as well as possessing 5% share on the global market of the corporate blockchain technologies.

BiON presents the platform to facilitate integration of blockchain technology into business and provides simplified tools for development of smart contracts and decentralized business applications.

Concept

Services

BiON.SDK provides an application builder, where user with any level of programming knowledge can easily operate with machine learning technology, DApps and smart contracts.

BiON.Marketplace helps developers to tackle the monopoly of corporate software giants, allowing to trade and monetize developed applications.

BiON.Mind offers a set of training modules, including online courses lead by technology experts.

BiON.Protocol represents fundamentals for the integration of Smart Contracts and DApps into custom corporate blockchains and provides interface to external systems.

BiON.Cloud stores corporate data in distributed registries providing reliable personal and corporate data protection.

BiON.Wallet is an internal exchange point, allowing and simplifying the exchange process of any currency to BiON tokens and vice versa.

Private blockchain

BiON Pro facilitates deployment of a custom blockchain on the corporate server, consequently, speeding up an application execution. Moreover, applications developed under BiON Pro license will not require expert check up and will bypass general BiON platform.

Advantages of buying Bion tokens

- Purchase business applications (bApps) and ready-made decentralized applications (dApps) at the BiON.Marketplace;
- Monetizing of development expertise and solution audit;
- Subscription access to the BiON.SDK;
- Trading fees on applications and Smart Contracts sold on the BiON.Marketplace;
- Payments for ad promotion at the BiON.Marketplace;
- BiON.Pro purchase.
